Subject Index

Adhesion, 137
Adsolubilization of 2-naphthol, 25
Adsorption, 17, 265
Adsorption isotherm, 265
Adsorption isotherms, 243
Adsorption of surfactant, 25
Aerosol cylinders, 211
Affinity microbeads, 223
Aggregation kinetics, 149
Aggregation probability, 149
Air–water boundary, 237
Alkyl glucoside surfactants, 165
Alkyl ketene dimers (AKD) sizing, 127
Alkyl polyglucoside, 69
Alumina, 17
Aluminum, 137
Arenediazonium ion, 53
Atomic force microscopy, 127
Atomic force microscopy (AFM), 137

Binary polymer blends, 159
Bitumen, 183
Browning, 175

Carbon tetrachloride, 85
Carboxyfluorescein release, 165
Catechol, 175
Chemical trapping, 53
Chromatographic air separation, 243
Cibacron blue F3GA, 223
Coal adsorbents, 265
Concentrated emulsion, 101
Concentration polarization modeling, 193
Contact angle, 127
Contraction, 183
Counterion binding, 53

Desalination, 193
Disjoining pressure, 109
Dynamic surface tension, 3

Electrodialysis, 193
Emulsion, 183
Equation, 117
Erionite, 243
Fractal dimension, 149
FT–Raman, 175

Galvanostatic regime, 193
Gel, 183
Glycidyl methacrylate, 137
Gold, 271
Gold nanoparticles, 231
Graft polymerization, 137

Harmine, 85
Heavy metal, 223
HIPRE, 101
Humification, 175
Hydration number, 53
Hydrocarbons and fluorocarbons, 35

Information entropy, 149
Infrared spectroscopy, 251
Intensification of electrodialysis, 193
Interfacial composition, 53
Interphase reduction, 271
Isotherm, 17
Isotopic mixtures, 159

Langmuir monolayers, 117
Limiting current, 193
Lipoaminoacid, 101
Lognormal distribution, 149

Mesopore surface, 265
Micelles, 3
Microcrystalline cellulose suspensions, 237
Microemulsion, 85
Molecular sieve effect, 243
Molecules, 3

PII: S0927-7757(00)00727-5

Nanoparticles, 271
Natural adsorbent, 243
NMR, 17
Non-stationary electric field, 193

Oil, 69
Order parameter, 25
Overlimiting current, 193

Particle contact angles, 251
Persistence length, 109
Photophoresis, 211
Polyelectrolytes, 109
Polyhydroxyethylmethacrylate microbeads, 223
Polymerization, 175
Poly(tetrafluoroethylene), 137
Potentiostatic regime, 193

Reactivity, 101

Silane, 137
Silica particles, 251
Sintering, 183
Sodium alkylbenzenesulfonate, 17
Specific surface, 265
Stability constants, 223
Stabilizing effect, 35
Stratum corneum lipid liposomes, 165
Structure-mechanical barrier, 35
Sublimiting current, 193
Surface enhanced Raman spectroscopy, 175
Surface tension, 237
Surfactant, 101
Surfactant critical micelle concentrations, 165
Surfactant/lipid molar ratios, 165
Surfactant partition coefficients, 165
Surfactants, 35

Ternary polymer blends, 159
Thermophoresis, 211
Thin films, 109
Titanium dioxide with functional groups, 25
Transition, 117
Transmission electron microscopy, 231

Ultravoilet–visible spectra, 231

Valence band, 127
2-Vinylpyridine telomer, 231

Water, 69
Water adsorption, 251
Water AOT cyclohexane, 85
Water-in-oil emulsion, 101
Water purification, 265
Wettability, 251
Worm-like micelles, 109

X-ray photoelectron spectroscopy, 127
X-ray photoelectron spectroscopy (XPS), 137
